## BLUE COLOR REVOLUTION

*The World is passing through very difficult phase of economical crises & it is healthy sign for growing countries like India to have great success with their potential. India having large population of blue colour workforce & hence if properly trained -India can be successful manufacturing base next to China. We require to make our strength -workforce into Blue Colour Revolution with require skills & expertise.*

*It is necessary that Govt should encourage Educational Institute with incentives to start training camps for Industrial skill training. It should be like ITI training institute for all industrial sectors.*

*The Textile Industry is oldest & labour-intensive industry. It may be contributing 5% to GDP but can give larger employment to lower class workforce. It is possible that Textile Industrial hubs will welcome such facilities & can absorb skill workforce. In view of large employment requirements textile industry is always facing shortage of skill operators in Spinning -Weaving -Processing & Garmenting.*

*The state Govts should think it positively to create such facilities in consultation with Industry experts. We as Textile Association India -Mumbai will defiantly welcome & support such initiative. Today every state is facing **migrant labour** issue due to COVID -19 & hence can create such facilities as per Industry's requirements.*

*It will help every state to resolve unemployment & can attract more investors. It will help financially to overcome economical crises. It is just my opinion to face today's situation.*
